技术规格

Background:	The cytoplasmic peripheral membrane protein encoded by this gene functions as a protein-tyrosine kinase substrate in microvilli. As a member of the ERM protein family, this protein serves as an intermediate between the plasma membrane and the actin cytoskeleton. This protein plays a key role in cell surface structure adhesion, migration and organization, and it has been implicated in various human cancers. A pseudogene located on chromosome 3 has been identified for this gene. Alternatively spliced variants have also been described for this gene.
Applications:	WB
Name of antibody:	EZR(Phospho-Tyr478)

Immunogen:	Peptide sequence around phosphorylation site of tyrosine 478 (P-V-Y(p)-E-P) derived from Human Ezrin.
Full name:	ezrin
