## 技术规格

Background:	This gene encodes a chromatin-associated enzyme, poly( ADP-ribosyl)transferase, which modifies various nuclear pr oteins by poly(ADP-ribosyl)ation. The modification is depe ndent on DNA and is involved in the regulation of vario us important cellular processes such as differentiation, pr oliferation, and tumor transformation and also in the reg ulation of the molecular events involved in the recovery of cell from DNA damage. In addition, this enzyme may be the site of mutation in Fanconi anemia, and may parti cipate in the pathophysiology of type I diabetes.
Applications:	ELISA, WB, IHC
Name of antibody:	PARP1
Immunogen:	Synthetic peptide of human PARP1
Full name:	poly (ADP-ribose) polymerase 1
